PERFORMANCE MARKETING SPECIALIST

Meta Ads that generate leads at scale, without inflating cost.

I plan, launch and optimize paid acquisition for a Turkey-based education academy. Over 14 months I have managed **TL 171,000+ in Meta ad spend** across **27 education programs**, producing **11,400+ qualified leads** at a blended **TL 15.06 cost per lead**.

SELECTED WORK

Three campaigns, three different problems.

One shows scale at low cost. One shows diagnosis under platform volatility. One shows lead quality over lead volume.

CASE STUDY 01

PhD in Political Science and International Relations

IRA Academy · 4–30 April 2026 · Meta Ads lead generation

1,544	TL 4.62	801	3,168
Qualified leads	Cost per lead	Direct inquiries in comments	Post engagements

Objective

- Generate high-intent leads for a newly launched doctorate program inside a 27-day window.
- Hold cost per lead below the account average while scaling volume.

What I did

- Built a segmented audience structure combining interest-based targeting with lookalike expansion.
- Ran structured creative A/B tests and reallocated budget daily toward the lowest-CPL ad sets.
- Refined Instant Form fields to reduce friction without diluting lead intent.
- Ran the short-form video creative that carried the campaign.

Outcome

- Delivered **1,544 leads at TL 4.62**, the lowest cost per lead in the account and **69% below the blended average**.
- Generated **801 direct inquiries in the comment thread**, a demand signal rather than passive reach.
- Highest post engagement of any campaign: **3,168 interactions**, including 270 saves.

CASE STUDY 01

PhD in Political Science

IRA Academy · 4–30 April 2026 · Meta Ads lead generation

Live Meta Ads Manager row, unmodified

METRIC	VALUE	METRIC	VALUE
Amount spent	TL 7,132.66	Results	**1,544 leads**
Impressions	995,039	Cost per result	**TL 4.62**
Reach	245,512	Frequency	**4.05**
Link clicks	9,993	CPC	**TL 0.32**

1,544 leads at TL 4.62 — the lowest cost per lead in the account, 69% below the blended average.

1,544 leads · TL 4.62 per lead

CASE STUDY 02

Performance recovery during platform volatility

IRA Academy · 15 Oct – 30 Nov 2025 · AI and Cybersecurity Strategies diploma

TL 130.62	TL 50.79	61%	1.71%
Peak CPL during volatility	CPL after recovery	CPL reduction	CTR after relaunch

The problem

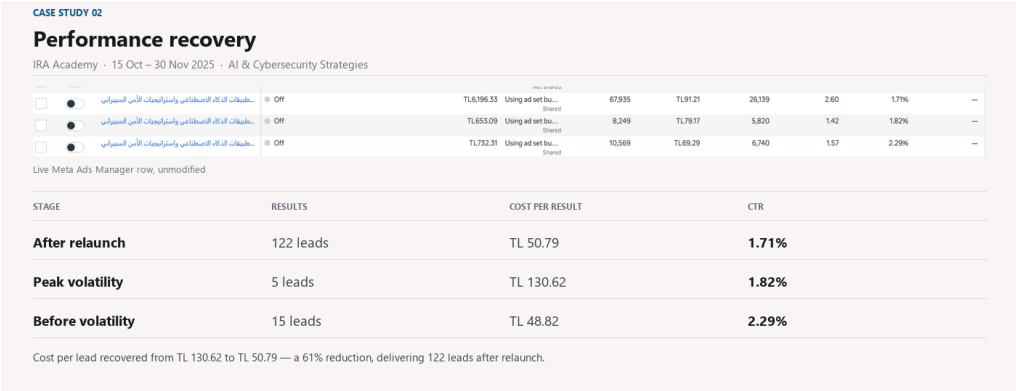

- Mid-flight, cost per lead jumped from **TL 48.82 to TL 130.62**, a 168% increase.
- No changes had been made to targeting, creative or bidding. The shift was platform-side.
- Standard levers such as budget shifts and audience tweaks were not recovering delivery.

What I did

- Isolated the variable: confirmed no internal change, so treated it as delivery instability.
- Paused the affected campaign instead of continuing to spend into rising costs.
- Duplicated the campaign to reset the learning phase and relaunched with optimized settings.
- Monitored early delivery metrics closely and reallocated budget once CPL stabilized.

Outcome

- Recovered cost per lead to **TL 50.79**, a **61% reduction** from the peak.
- The relaunched campaign delivered **122 leads** at the recovered CPL with a **1.71% CTR**.
- Avoided writing off the campaign. Pausing and relaunching preserved the budget instead of burning it on a degraded delivery curve.

CASE STUDY 02

Performance recovery

IRA Academy · 15 Oct – 30 Nov 2025 · AI & Cybersecurity Strategies

Live Meta Ads Manager row, unmodified

STAGE	RESULTS	COST PER RESULT	CTR
After relaunch	122 leads	TL 50.79	**1.71%**
Peak volatility	5 leads	TL 130.62	**1.82%**
Before volatility	15 leads	TL 48.82	**2.29%**

Cost per lead recovered from TL 130.62 to TL 50.79 — a 61% reduction, delivering 122 leads after relaunch.

Meta Ads Manager: rows showing the CPL shift and recovery **TL 48.82 → 130.62 → 50.79**

> **Why this one matters:** anyone can scale a campaign that is already working. This is what happens when the platform moves underneath you and the numbers stop making sense. The job is to diagnose before reacting.

CASE STUDY 03

Diploma in Intelligence Studies: lead quality over volume

IRA Academy · 13–31 July 2026 · full-year diploma, premium subscription

480	188	125	115
Qualified leads	Shares, highest in account	Post saves	Comments

Context

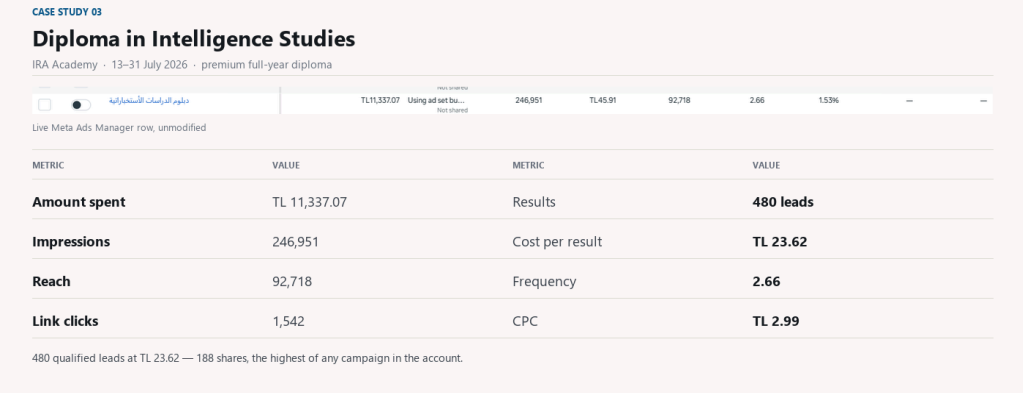

- A premium program delivered over a full academic year: two semesters, eight specialized courses and 240 training hours.
- Subscription price of **USD 1,000**, the highest-value offer I have run ads for.
- This was the first campaign I ran for the program, and the one that established trust with the client.

Approach

- Led with the program's substance (training hours, course count, structure) rather than discount framing.
- Positioned it for a professional audience evaluating a career-relevant qualification.
- Kept the creative focused on credibility signals appropriate to a premium price point.

Outcome

- **480 qualified leads at TL 23.62** cost per lead on TL 11,337 of spend.
- **188 shares, the highest of any campaign in the account**, indicating the message was worth passing on.
- 115 comments and 125 saves from an audience that had to qualify itself for a premium program.

HOW I WORK

A repeatable loop, not one-off campaigns.

Every program follows the same operating sequence. The discipline is in running it consistently, program after program, for 14 months.

01

Objective and KPI definition

Set the target before spending: cost per lead ceiling, volume expectation, and the quality bar a lead has to clear to count.

02

Audience architecture

Build in layers: core interest targeting, lookalike expansion from existing converters, and retargeting pools for form openers and engaged users.

03

Creative testing system

Produce multiple variants per concept and test systematically. Kill underperformers early; put budget behind what the data backs.

04

Funnel friction reduction

Optimize Instant Form fields and the landing experience to lift completion rate without lowering lead intent.

05

Daily performance monitoring

Track cost per lead, CTR and delivery health daily. Volatility gets caught in the first 48 hours, not at the end of the month.

06

Optimization and scaling

Reallocate budget toward the ad sets holding efficiency, and scale only while the cost curve stays flat.

ABOUT

Paid media for education programs.

I am a performance marketing specialist based in **Giza, Egypt**, working remotely for a **Turkey-based education academy**. I hold a Bachelor of Mass Communication in Advertising and Public Relations, a dual-award program between the **University of Bedfordshire (UK)** and **MSA University (Egypt)**.

My work sits at the intersection of paid media and education marketing: offers that need to reach the right professional audience, at a cost per lead that still makes the unit economics work. I have also completed an agency-side media buying internship, where I built media plans and budget frameworks for multinational brands including **Audi** and **Lynk & Co.**

Open to new roles. I am based in **Giza, Egypt** and open to performance marketing and paid media positions across Egypt.
